

All turbulence  
begins with  
a tiny ripple

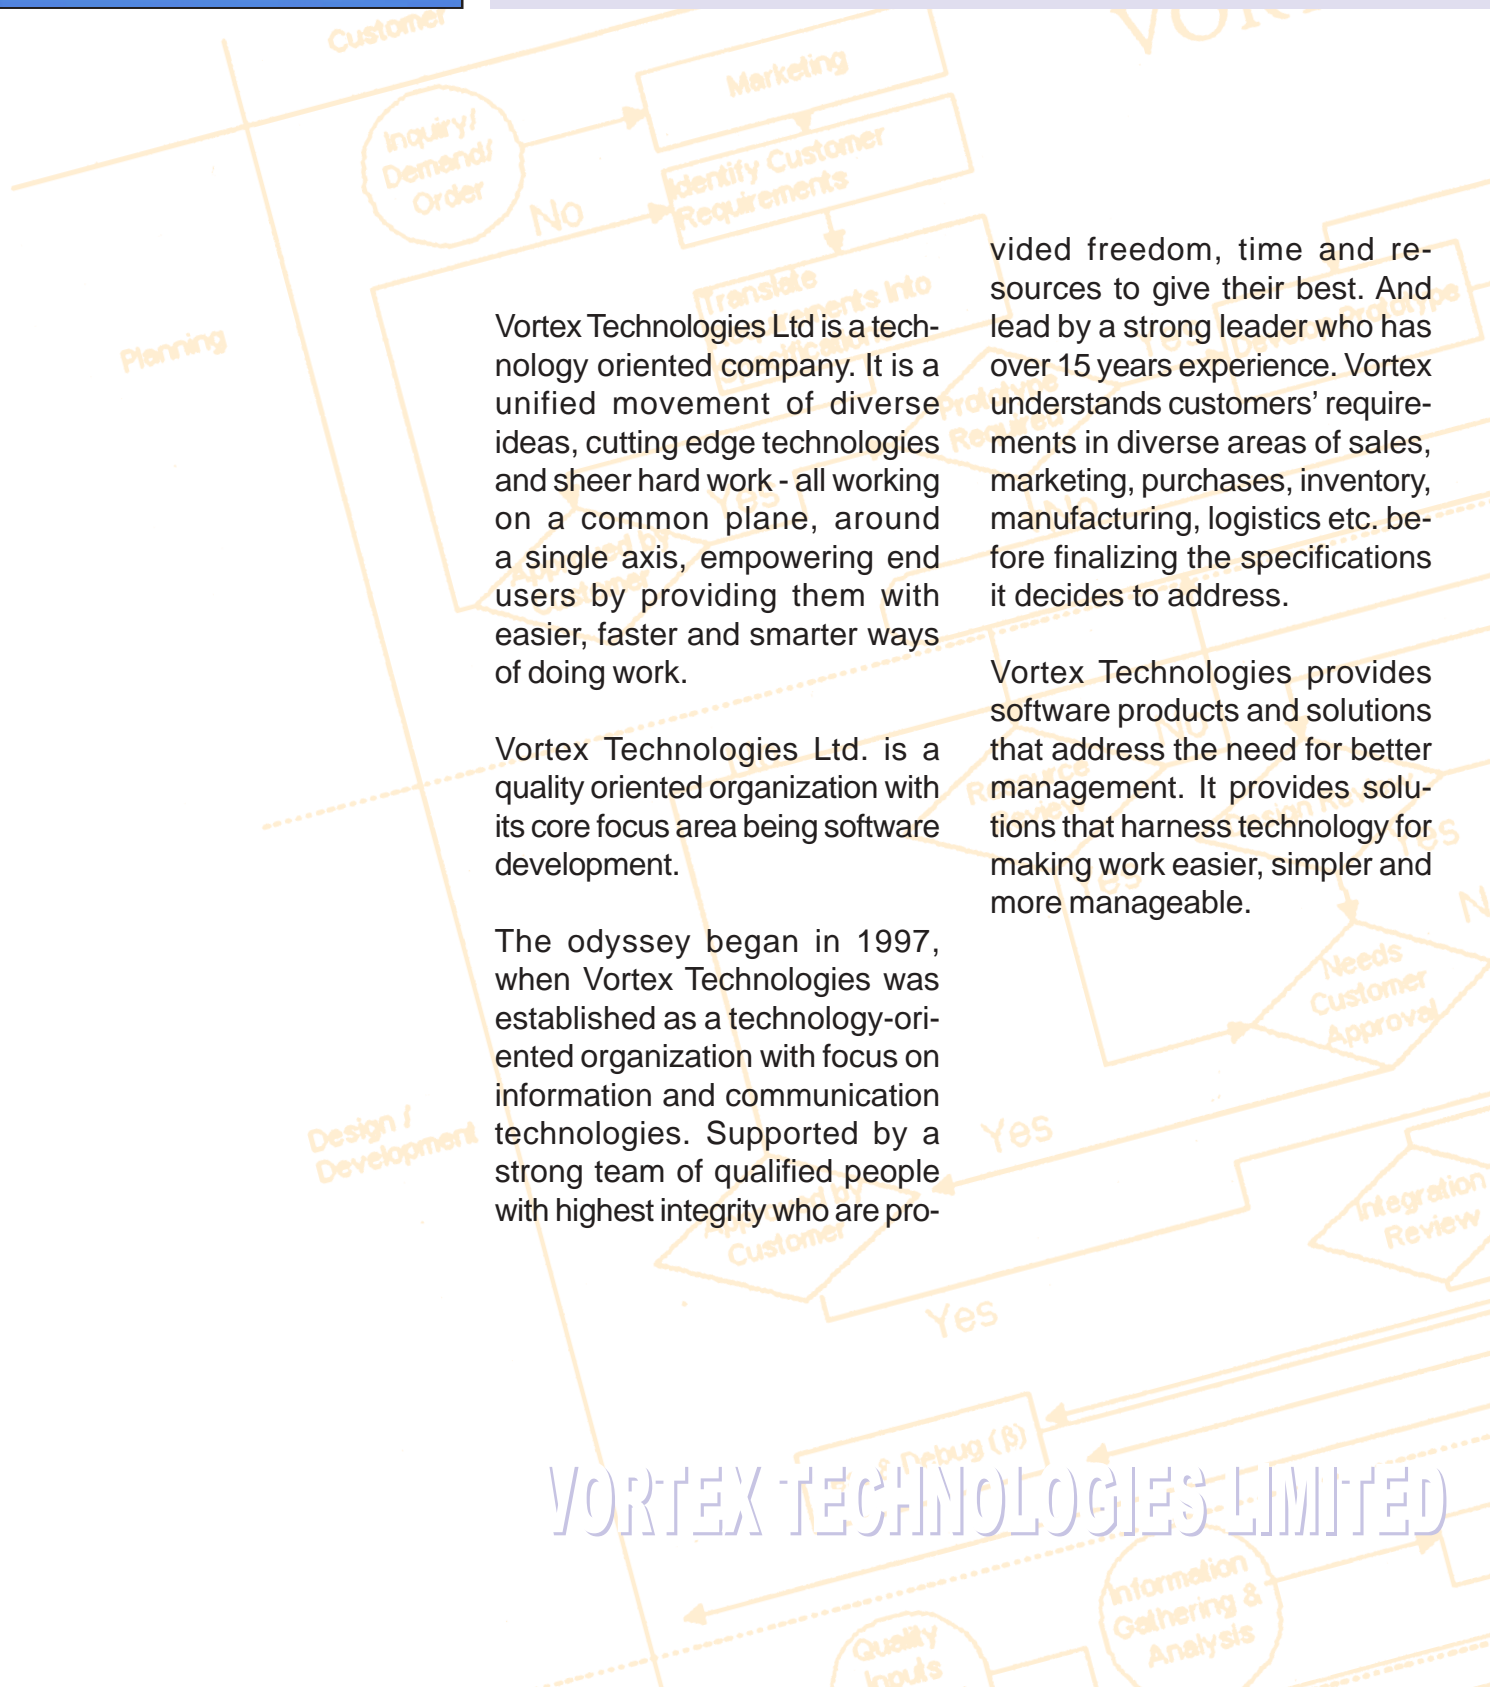

*A tiny ripple. Seems quite trivial in a huge body of water. But when that ripple meets strong forces from other sides, a vortex is formed.*

*A vortex is a body of diverse energies. And all energies need*

*to function in a single direction, along a common plane, for a greater impetus to be synergized. Channeling diverse efforts of various forces into a common goal.*

Vortex Technologies Ltd is a technology oriented company. It is a unified movement of diverse ideas, cutting edge technologies and sheer hard work - all working on a common plane, around a single axis, empowering end users by providing them with easier, faster and smarter ways of doing work.

Vortex Technologies Ltd. is a quality oriented organization with its core focus area being software development.

The odyssey began in 1997, when Vortex Technologies was established as a technology-oriented organization with focus on information and communication technologies. Supported by a strong team of qualified people with highest integrity who are pro-

vided freedom, time and resources to give their best. And lead by a strong leader who has over 15 years experience. Vortex understands customers' requirements in diverse areas of sales, marketing, purchases, inventory, manufacturing, logistics etc. before finalizing the specifications it decides to address.

Vortex Technologies provides software products and solutions that address the need for better management. It provides solutions that harness technology for making work easier, simpler and more manageable.

VORTEX TECHNOLOGIES LIMITED

# VORTEX TECHNOLOGIES LIMITED

For an organization built for the purpose of providing technology solutions for making work easier, quality is the catchword. Vortex Technologies provides the best quality solutions that follow ISO 9000 and SEI-CMM philosophy. At Vortex, every process along the value chain is given importance, so that only the best quality products and solutions emerge. We also ensure that our invaluable customers get optimum value for their money, and hence our products are economically priced. This is achieved by effective cost control, which is also a part of business methodology. To ensure quality solutions we have a highly experienced Qual-

ity Analysis team. Our Quality Analysts are actively involved in the development process to ensure that quality is built into the product instead of being tested into the same. This team prepares test & quality plans and also manages the bug tracking process.

Periodic auditing is an integral part of our quality system and our top management reviews audit reports and takes necessary action without delay.

*Vortex Technologies belongs to a league of world-class performers in the information arena. For an organization that channels its diverse energies into a cohesive purpose of software*

*development, Vortex has rightly taken on its name. As all turbulence begins with a tiny ripple, so does all that is technologically novel and strategically cardinal begin with an organization like Vortex.*

*What Gets Measured,  
Gets Done*

Softrack is a one hundred percent Web based business intelligence solution developed, deployed, and maintained on the .net ® platform.
