

All turbulence begins with a tiny ripple

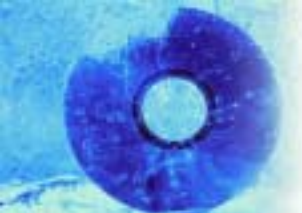

A tiny ripple. Seems quite trivial in a huge body of water. But when that ripple meets strong forces from other sides, a vortex is formed.

A vortex is a body of diverse energies. And all energies need to function in a single direction, along a common plane, for a greater impetus to be synergized. Channeling diverse efforts of various forces into a common goal.

Vortex Technologies belongs to a league of world-class performers in the information arena. For an organization that channels its diverse energies into a cohesive purpose of software development, Vortex has rightly taken on its name. As all turbulence begins with a tiny ripple, so does all that is technologically novel and strategically cardinal begin with an organization like Vortex.

Visibility

Softrack provides great visibility to every process owner through its powerful Dashboards and linked reports.
